Motivation

Developed GDPRov [1],
an ontology for modelling provenance
related to GDPR compliance

How to relate with
GDPR obligations
and concepts?

[1] Pandit, H.J., Lewis, D.: **Modelling Provenance for GDPR Compliance using Linked Open Data Vocabularies**. In: Proceedings of the 5th Workshop on Society, Privacy and the Semantic Web - Policy and Technology (PrivOn2017) (PrivOn) (2017).

GDPR document

- References to are textual
- Articles: Article 4(11), A4-11
- Concepts: Compliance, Personal Data
- No consistent format in legal domain
- Arbitrary citations

Great for humans, but not for machines

Existing Work

- Legalisations – Linked Data – Semantic Web
- European Publications Office provides only document level metadata
- How to refer to specific articles, terms, or concepts within GDPR?

**research problem right here!**

GDPRtEXT

(GDPR text extensions)

1. Expose the GDPR document as Linked Data
2. Define an ontology of its terms and concepts

Approach

- 1) Understand document structure
- 2) Represent as linked data
- 3) Identify terms and concepts
- 4) Define Ontology

Structure of GDPR

- Recitals (173)
- Chapters (10 – numbered I to X)
 - Sections (numbered in every chapter)
 - Articles (total 99, continuous numbering)
 - Points (numbered in every article)
 - Subpoints (numbered in every point)
- Citations (21)

GDPRtEXT Ontology

Extend ELI Ontology

- `eli:LegalResource` (LR) is a legal resource
- `eli:LegalResourceSubdivision` (LRS) is its (sub-)part
- We extend LRS to define:
 - Chapter
 - Section
 - Article
 - Point
 - SubPoint
 - Recital
 - Citation

ELI Ontology

European Legislation Identifier

- Published by European Publications Office
- Defines metadata for legal documents
- GDPRtEXT uses latest version (v1.1)

Abstract

The General Data Protection Regulation (GDPR) is comprised of several articles, each with points that refer to specific concepts. The general convention of referring to these points and concepts is to quote the specific article or point using a human-readable reference. This ontology provides a way to refer to the points within the GDPR using the [European Legislation Identifier](#) ontology published by the European Publication Office. It also defines the concepts relevant or defined by the GDPR using the [Simple Knowledge Organization System \(SKOS\)](#) ontology.

1. Introduction

[back to TOC](#)

The **GDPRtEXT** ontology aims to provide a way to refer and use concepts defined by the General Data Protection Regulation (GDPR). It does so by exposing the text of the GDPR as a linked data resource using the European Legislation Identified (ELI) ontology. [SKOS](#) is then used to define concepts defined / specified / used by the GDPR.
