# Harsh(vardhan J. Pandit)

## An Introduction

- Assistant Professor - ADAPT Centre - Dublin City University
- Postdoctoral Fellowship: knowledge graph for DPIA / GDPR
- PhD in Computer Science (2020) - Representation of activities involving personal data and consent for GDPR information
- Chair of W3C Community Groups: Data Privacy Vocabularies and Controls Community Group (DPVCG) and Consent (ConsentCG)
- Nominated Technical Expert by European Data Protection Board (EDPB)
- Member of National Standards Authority of Ireland (NSAI) committees for Cybersecurity/ Privacy and AI at EU and ISO forums

# GDPR<sup>1</sup>

World-Changing EU law that regulates **Processing** of **Personal Data**

1. What is meant by Personal Data ?
2. What is meant by Processing ?
3. How is data is being processed? (what/how/where...)
4. Who is involved? (whose data, processed by whom)
5. How to check processing is following the rules of GDPR?

[1] <https://eur-lex.europa.eu/eli/reg/2016/679/oj>

# Personal Data

## Some “definitions” from across the globe

‘personal data’ means **any information relating to an identified or identifiable natural person** (‘data subject’); an identifiable natural person is one who can be identified, directly or indirectly, in particular by reference to an identifier such as a name, an identification number, location data, an online identifier or to one or more factors specific to the physical, physiological, genetic, mental, economic, cultural or social identity of that natural person;

**GDPR Art.4(1)**

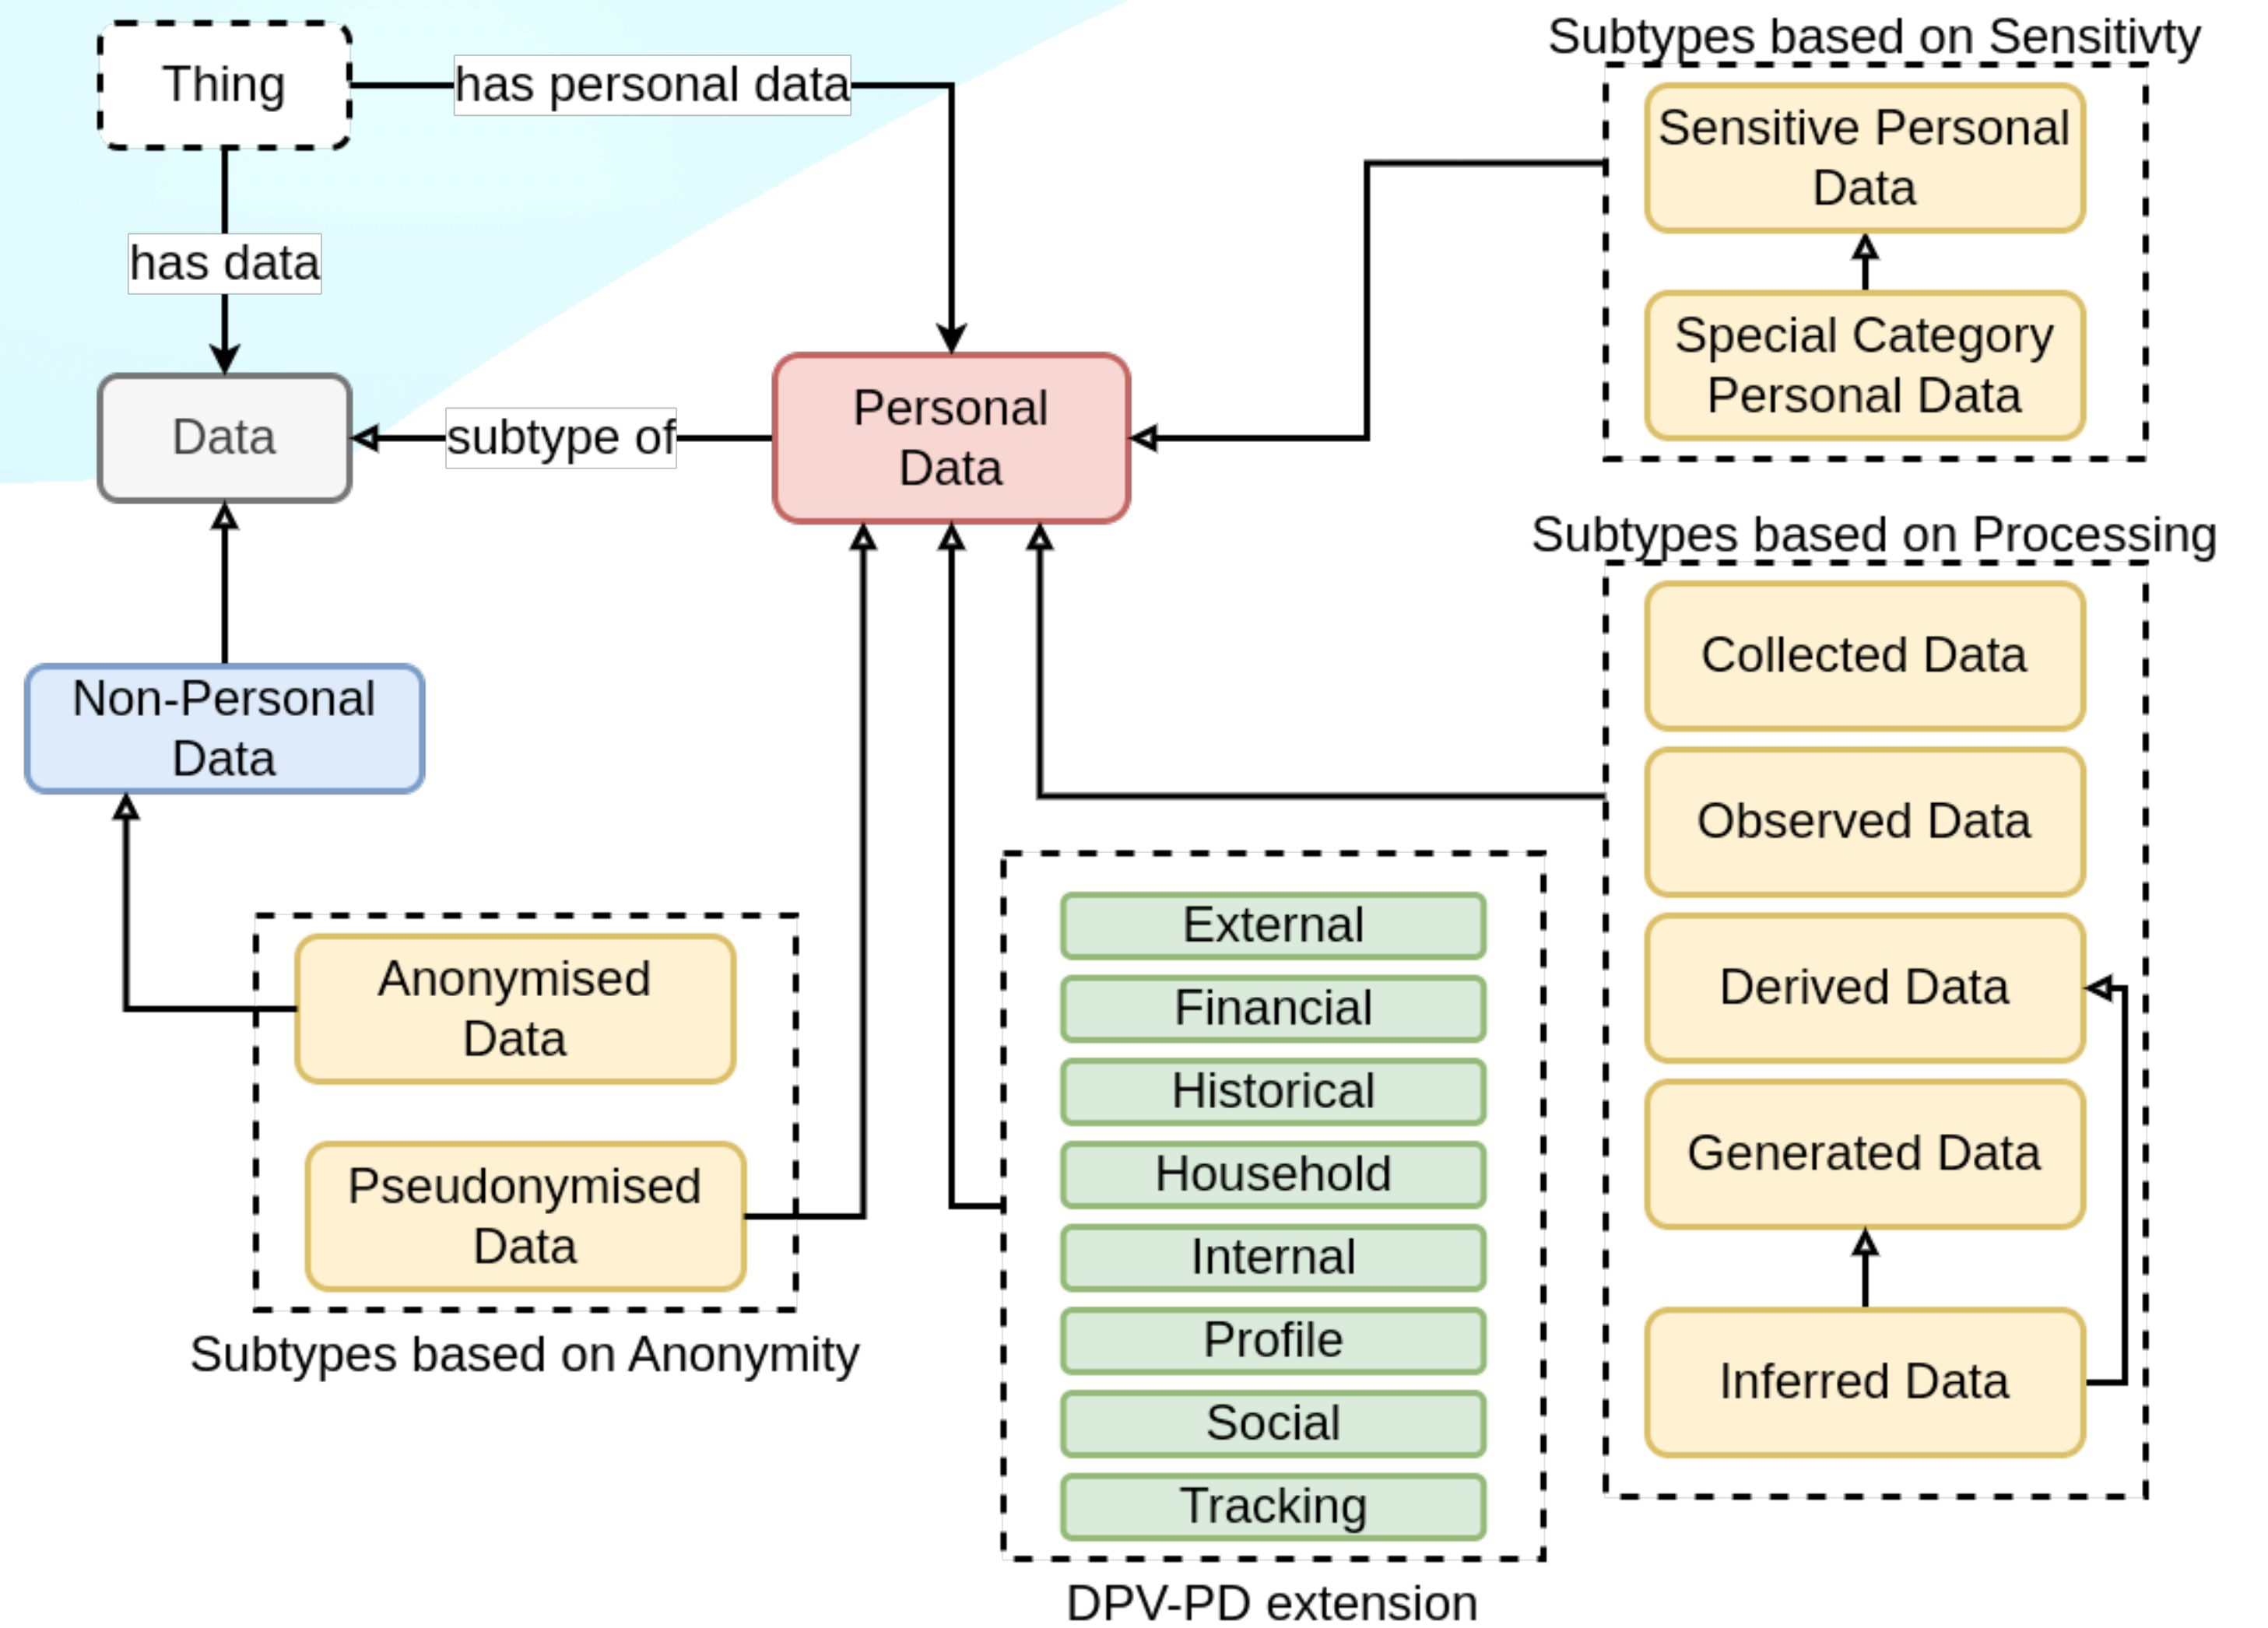

any information that (a) **can be used to identify the PII principal to whom such information relates, or (b) is or might be directly or indirectly linked to a PII principal**

**ISO 29100:2011**

“Personal information” means information that **identifies, relates to, describes, is reasonably capable of being associated with, or could reasonably be linked, directly or indirectly,** with a particular consumer or household.

**CCPA 1798.140 (o)(1)**

# Data Personal Data

# Personal Data

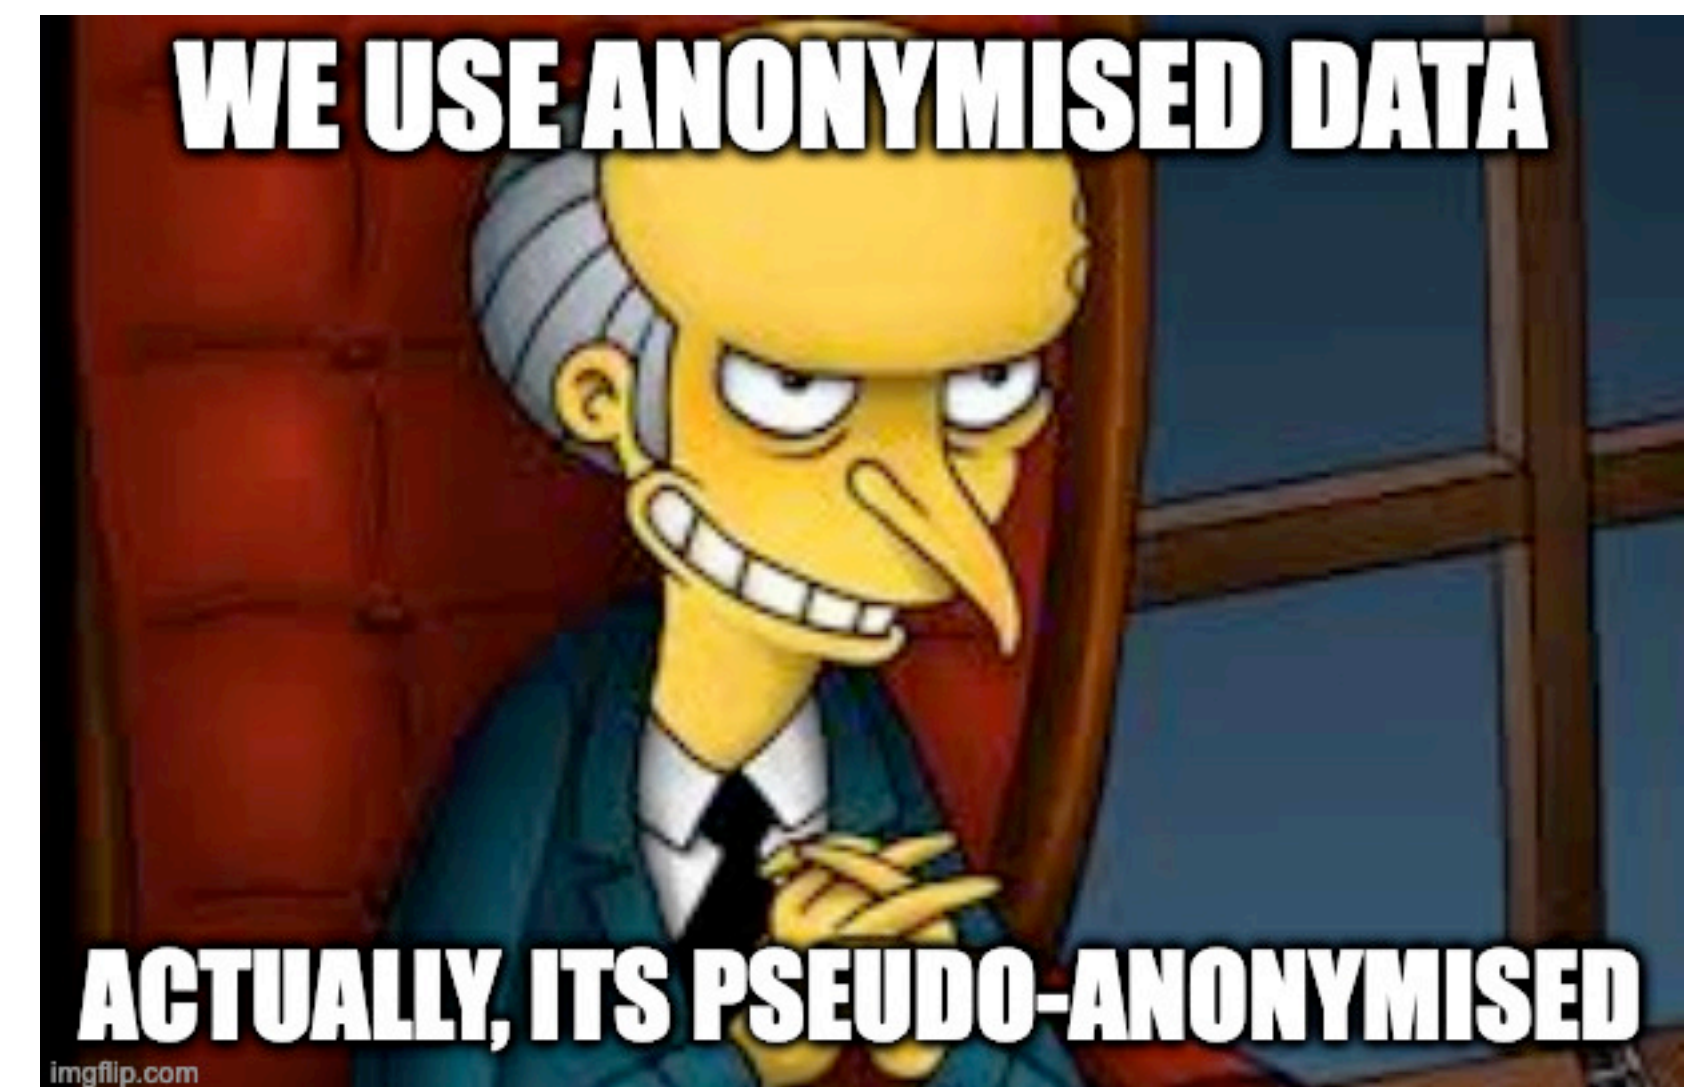

## Identifiers, and Identifiability

1. Identifiers: Harsh (name), xyz@email.com (email)
2. Non-identifiers: Black (hair), Brown (eyes), 1.66m (height), etc.
3. For a room full of people, combine non-identifier to uniquely identify a person (me) — thus creating an identifier !!!
4. Useful technique for **fingerprinting**, **profiling**, **tracking**

# Q: When is Personal Data not 'Personal' anymore?

Ans: When it is (completely) anonymised

- Anonymisation is the removal of (some) 'identifying' attributes from data
- Merely using "anonymisation" does not produce anonymised data
- It produces 'pseudo-anonmised' data, which is still personal data
- 'Completely anonymised' if it is **not identifiable**
- E.g.
  - Your exact location = personal data
  - approx. house = still personal data
  - approx. area = still personal data, but less
  - City = still personal data, but lesser
  - Country = anonymised, kind of

# Q: When is Anonymised Data not Anonymised?

Ans: When it is possible to 're-identify' using any (practical) means possible

- Data is anonymised, i.e. all identifiers like names and emails are removed
- But using a 'combination' of remaining data points, a person is still identified
- Since **re-identification** is possible, its not '**fully anonymised**'
- 'Exploits'
  - Aggregated location — person's routines are unique
  - Voting and voters data
  - Fingerprinting - browser configurations, preferences
- GDPR applies to all the above since it is 'personal data'

# Personal Data

ISO 29184:2020

## From Data Subject

### Given

Email in forms

### Observed

Location via IP

### Inferred

Interests via website history

## Other Sources

### Third-Party

RTB / Online Advertising

### Public

ClearviewAI

# Personal Data: Sensitive, and Special

Special category personal data is to GDPR what Ferrero Rocher is to chocolates

## Sensitive:

- data that merits additional security
- older term used widely

## Special:

- requires additional/specific legal permissions
- newer term introduced in GDPR

# GDPR Prohibits

**Processing of Special Categories of Personal Data  
and**

**Requires additional obligations via legal basis in Article. 9**

racial or ethnic origin, political opinions, religious or philosophical beliefs, or trade union membership, and the processing of genetic data, biometric data for the purpose of uniquely identifying a natural person, data concerning health or data concerning a natural person's sex life or sexual orientation shall be prohibited

## GDPR Article 4(11)

‘processing’ means **any operation or set of operations which is performed on personal data** or on sets of personal data, whether or not by **automated means**, such as collection, recording, organisation, structuring, storage, adaptation or alteration, retrieval, consultation, use, disclosure by transmission, dissemination or otherwise making available, alignment or combination, restriction, erasure or destruction;

Notable alignment with ‘common’ terms used in documents, interfaces, etc.

collect, store, use, share, delete

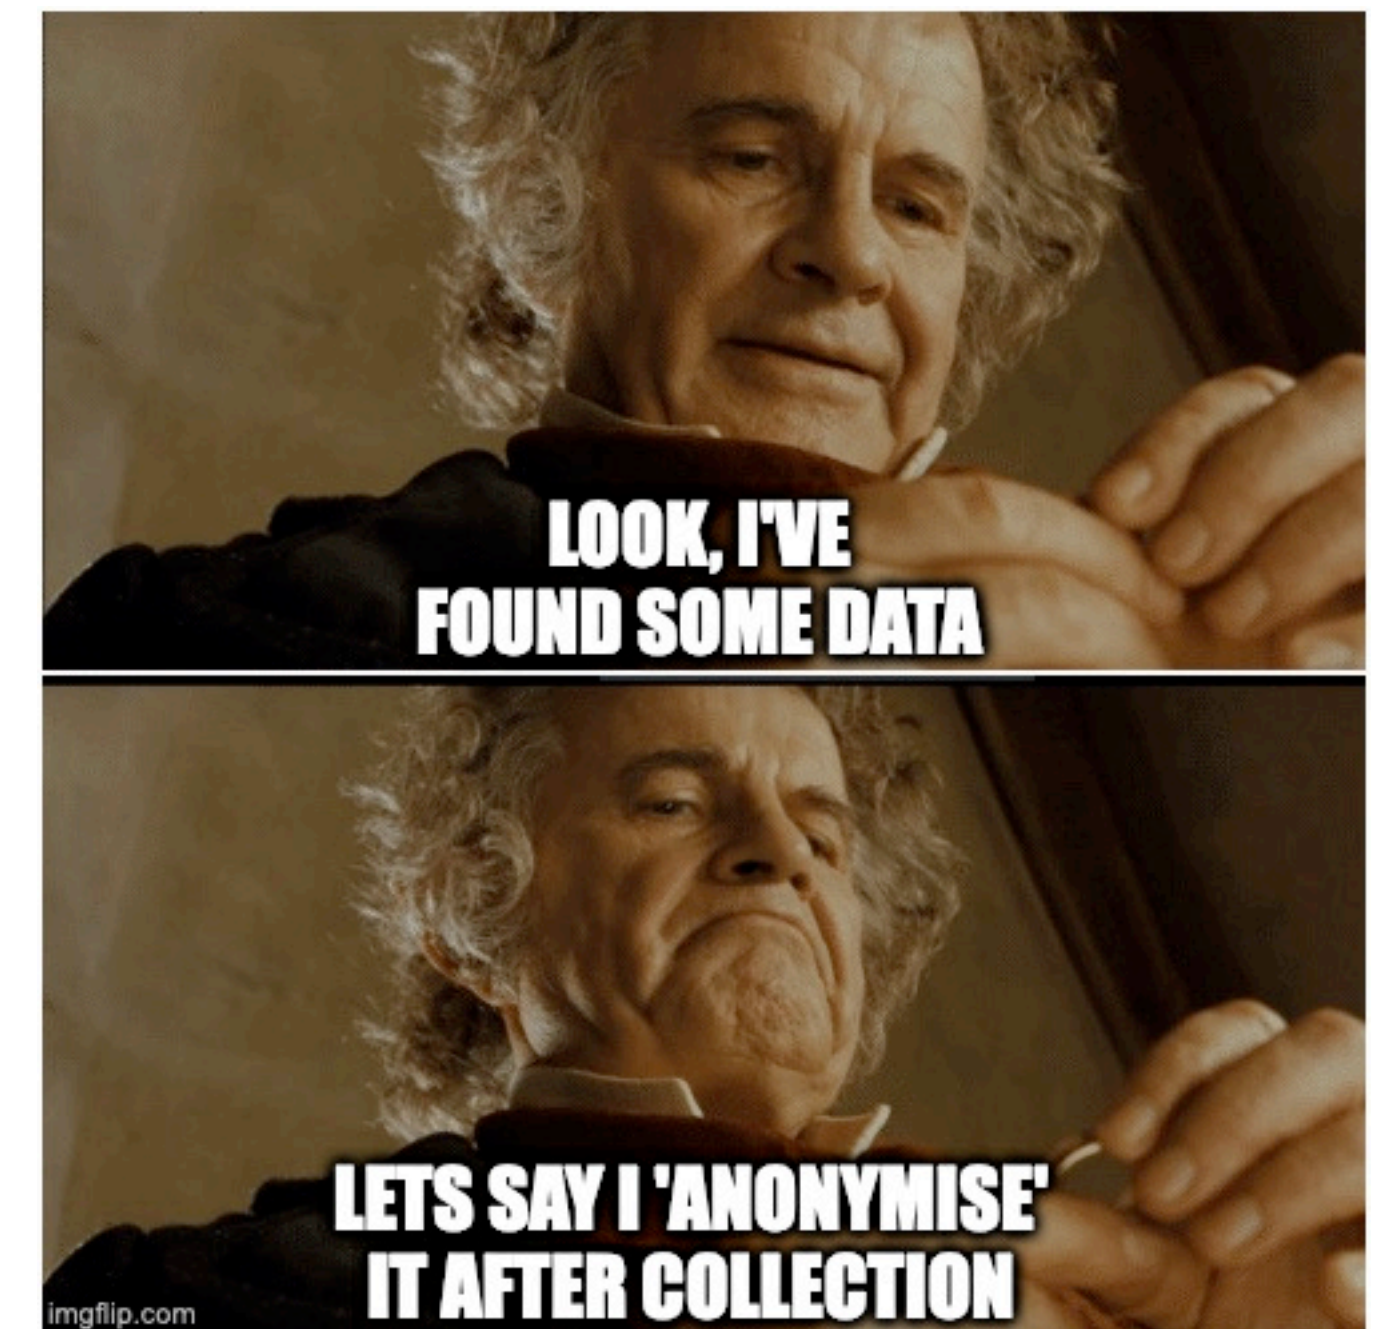

**Systematic Monitoring**  
**Evaluation & Scoring**  
**Matching & Combining**  
**Automated Decision Making**  
**Innovative Use of New Technologies**

**GDPR Article.35 Data Protection Impact Assessments**

# GDPR applies before Processing starts

## Common Misinterpretations

- Data collected but ‘anonymised’ is not subject to GDPR
- If data isn’t shared, nothing needs to be declared
- Collecting anonymised data and attaching an identifier to it
- Hiding things that require transparency and permission
  - Scale and scope of processing
  - Involvement of special categories
  - Involvement of any automated decision making
  - Creating, sharing, using - profiling

# All Processing in GDPR \*must\* be towards a Goal

Implied when a 'Purpose' is necessary as per Article.5

Every Processing \*must\* have a Purpose

Purposes must be separate from other matter, including other purposes

Purposes must be \*specific\* and \*unambiguous\*

Purposes are intended to be human-readable and human-comprehensible

Purposes should not be broad and abstract

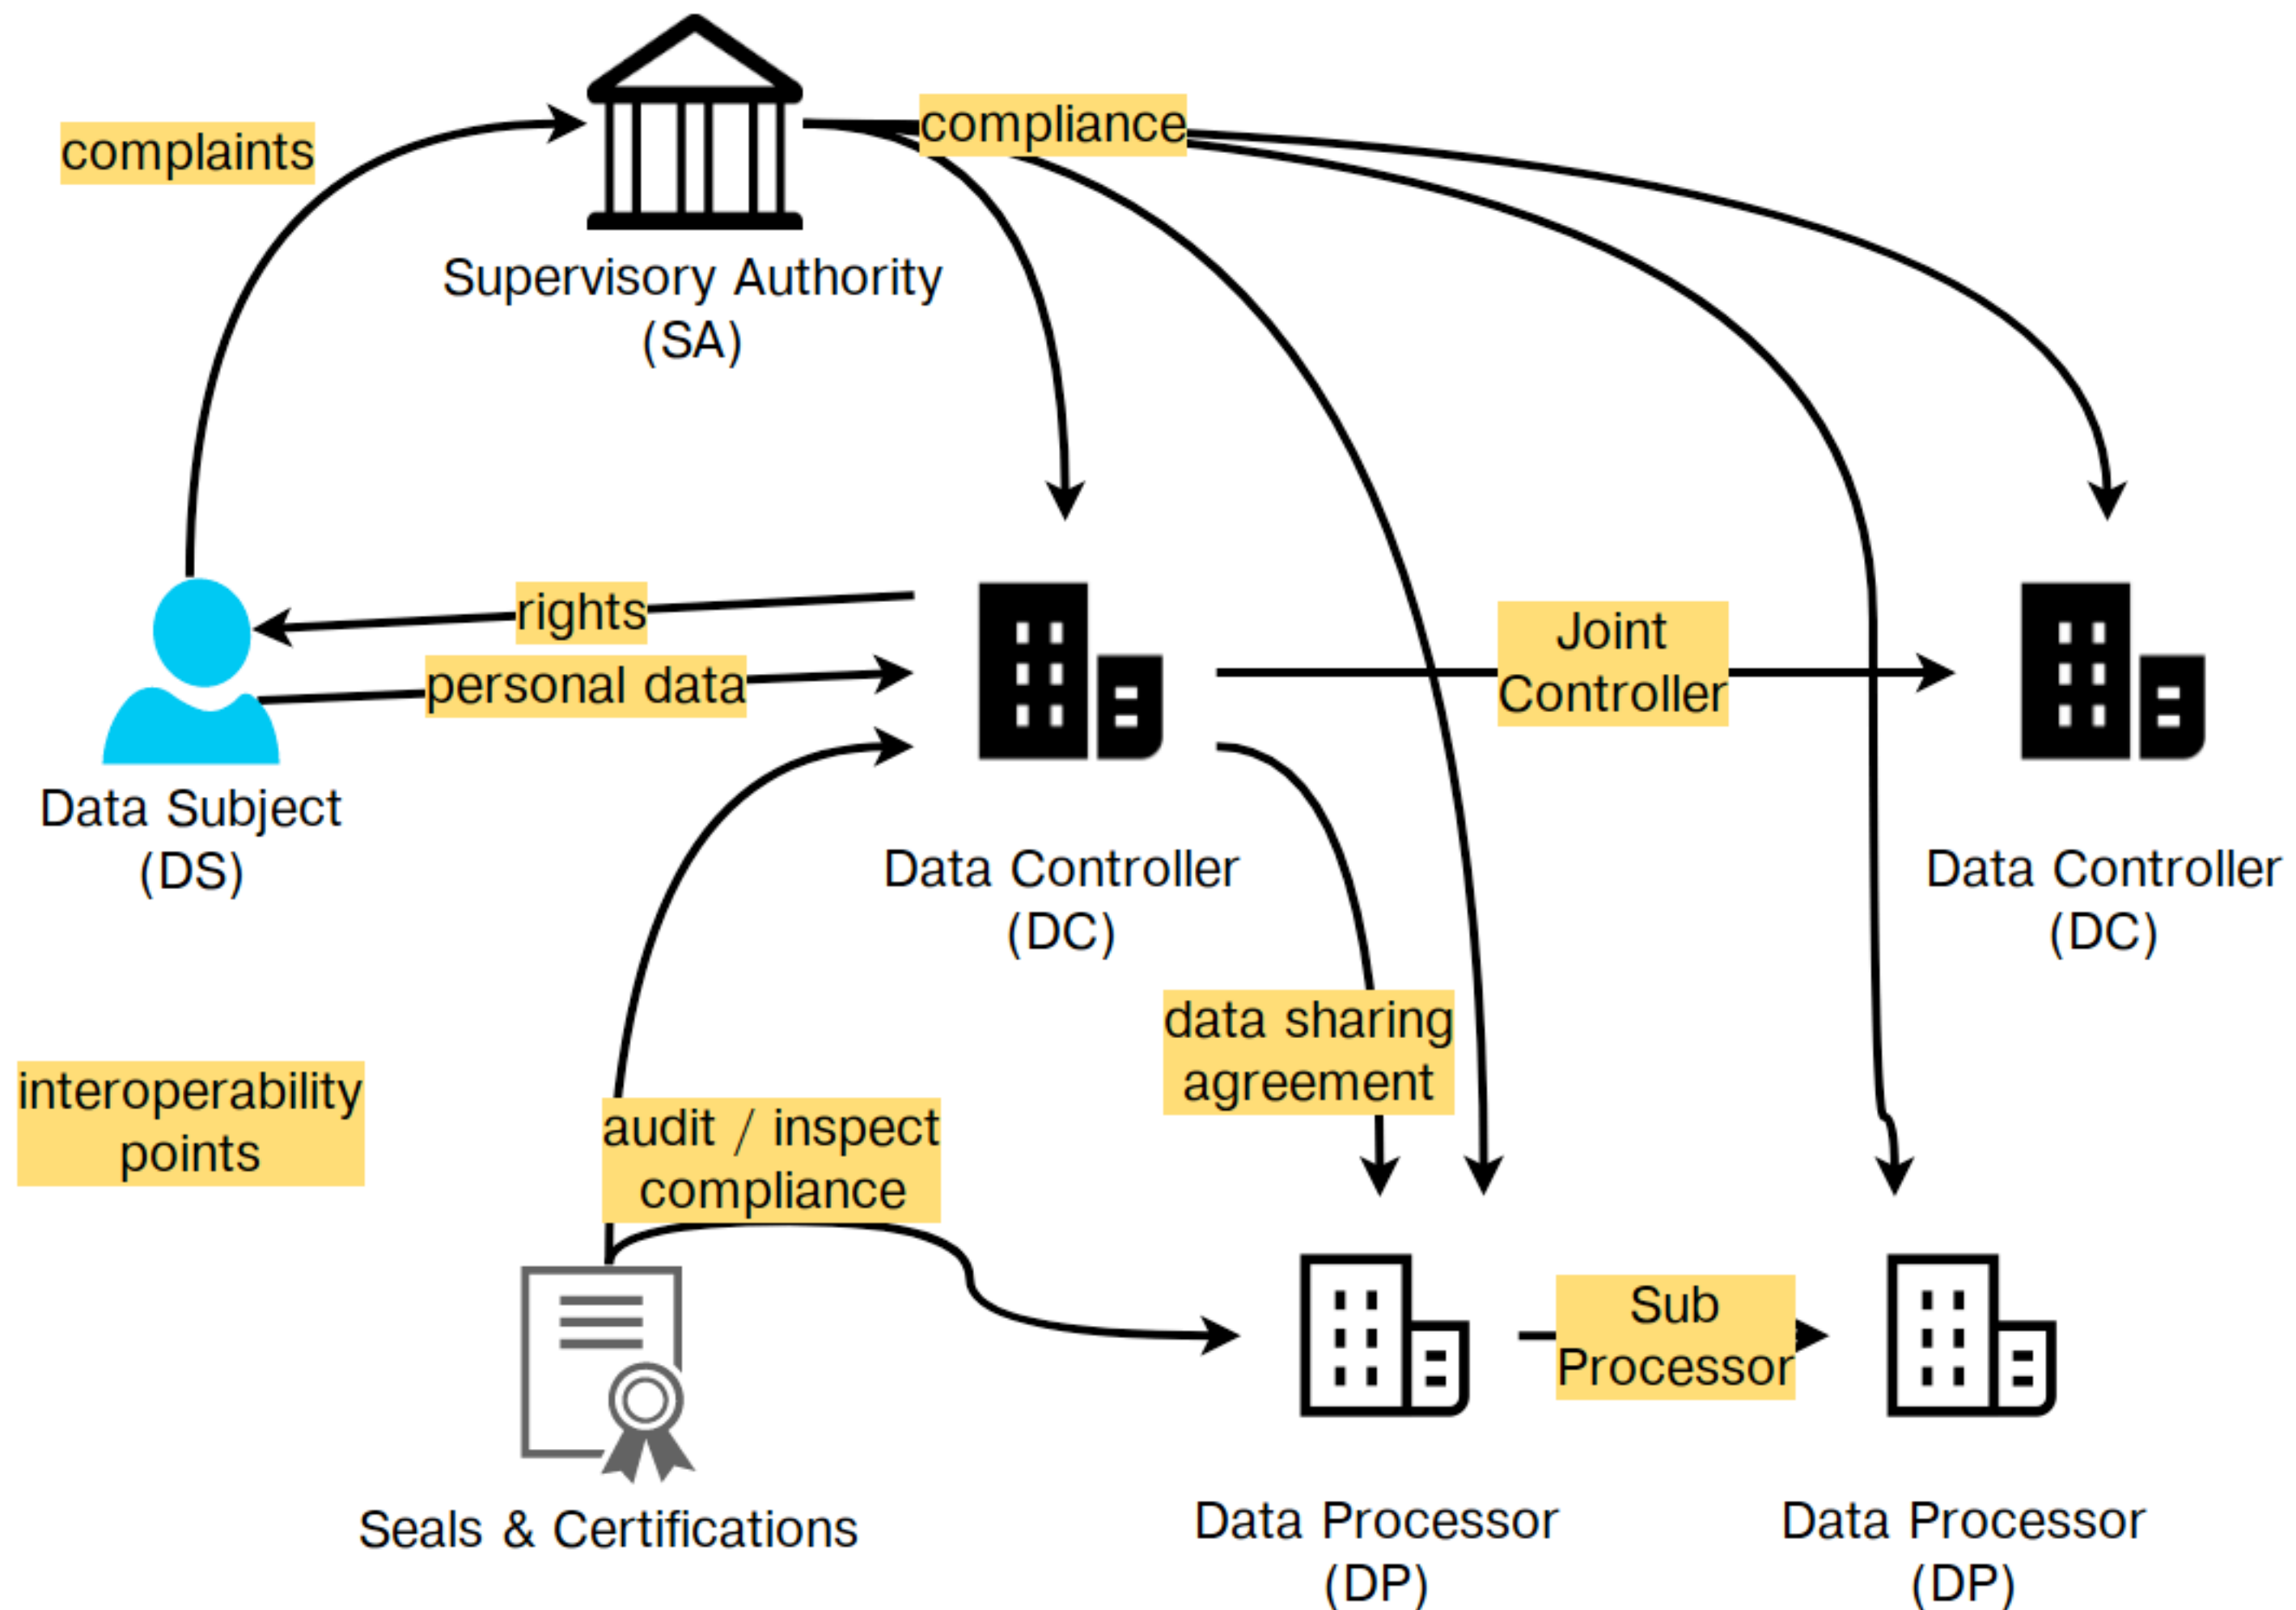

Purposes should be specific and contextual to their use-case

Purposes can be grouped or categorised, but not replaced, e.g. with Marketing for 'Sending new product emails'

Purposes don't have to necessarily benefit the data subject e.g. service optimisation

- Data Controllers are responsible for deciding the 'purpose'
- Data Controllers may not even 'touch' the data they 'control'
- Data Controllers can 'team up' to become Joint (Data) Controllers
- Processors only act on 'orders' given (explicitly) by Controllers
- Processors can appoint other (sub-)Processors, still governed by instructions from Controllers
- Processors deciding/ processing on their own become Controllers
- Data Protection Authorities (DPA) are empowered by GDPR to enforce its obligations on all entities

GDPR Data Interoperability Model,  
EURAS Annual Standardisation Conference (EURAS) 2018,  
Harshvardhan J. Pandit\* , Declan O'Sullivan , Dave Lewis  
<https://harshp.com/research/publications/010-gdpr-data-interoperability-model>

# GDPR's principles providing a framework for 'responsibility'

## **Principles (Article.5)**

lawfulness, fairness and transparency  
purpose limitation  
data minimisation  
accuracy  
storage limitation  
integrity and confidentiality  
accountability

## **Consent (Article.7)**

Informed  
Freely Given  
Unambiguous  
Balance of Power(s)  
Right to Withdraw  
Explicit Consent (e.g. for Article.9)

## **A12-A22 Rights**

Transparency (A.12)  
Notice (A.13, A.14) ;  
Object to Processing  
Rectification of Data  
Erasure (Right to be Forgotten)  
Restriction of Processing  
Right of Access  
Data Portability

## **A77 Right to complaint**

Any Data Subject can  
complaint to their Supervisory  
Authority (DPA)  
If DPA is in a different country  
than the company, then the  
DPA will 'lease' and 'co-operate'  
with the DPA of that country

# “AI” is just another technology...

How does GDPR apply? —> if personal data is involved

When can personal data be involved? Input/output?

Problems? Accuracy, transparency, principles, *consent*

When can it be misused? Jobs? Assessments? Decisions?

# Overview of Personalisation Issues

## Key takeaways

- What data is ‘used’ ??? —> Transparency
- What data is ‘needed’? What is ‘necessary’? —> Data Minimisation
- What are the sources of ‘data’ ? —> Transparency
- Is any data ‘sensitive’ ? Is it ‘special’ ? —> Ethical Concerns
- Is data (input/output) ‘accurate’ —> Accountability
- Is the output configurable ? —> Privacy by Design / Default
- Understand distinctions between *Privacy vs Security vs Identifiability vs Control*

# What the current state of the art?

- (1) when and how an AI model can be considered as ‘anonymous’;
- (2) how controllers can demonstrate the appropriateness of legitimate interest as a legal basis in the development and  
(3) deployment phases; and
- (4) what are the consequences of the unlawful processing of personal data in the development phase of an AI model on the subsequent processing or operation of the AI model.

## EDPB opinion on AI models: GDPR principles support responsible AI

 18 December 2024 EDPB

Brussels, 18 December - The European Data Protection Board (EDPB) has adopted an [opinion\\* on the use of personal data for the development and deployment of AI models](#). This opinion looks at 1) when and how AI models can be considered anonymous, 2) whether and how legitimate interest can be used as a legal basis for developing or using AI models, and 3) what happens if an AI model is developed using personal data that was processed unlawfully. It also considers the use of first and third party data.

The opinion was requested by the Irish Data Protection Authority (DPA) with a view to seeking Europe-wide regulatory harmonisation. To gather input for this opinion, which deals with fast-moving technologies that have an important impact on society, the EDPB organised a stakeholders’ event and had an exchange with the EU AI Office.

**EDPB Chair Talus said:** “AI technologies may bring many opportunities and benefits to different industries and areas of life. We need to ensure these innovations are done ethically, safely, and in a way that benefits everyone. The EDPB wants to support responsible AI innovation by ensuring personal data are protected and in full respect of the General Data Protection Regulation (GDPR).”

[https://www.edpb.europa.eu/news/news/2024/edpb-opinion-ai-models-gdpr-principles-support-responsible-ai\\_en](https://www.edpb.europa.eu/news/news/2024/edpb-opinion-ai-models-gdpr-principles-support-responsible-ai_en)

# Salient Points

- claims of an AI model's anonymity should be assessed on a case-by-case basis. For an AI model to be considered anonymous, both (1) the likelihood of direct (including probabilistic) extraction of personal data regarding individuals whose personal data were used to develop the model and (2) the likelihood of obtaining, intentionally or not, such personal data from queries, should be insignificant, taking into account 'all the means reasonably likely to be used' by the controller...
- analysing the necessity of the processing for the purposes of the legitimate interest(s) pursued (also referred to as "necessity test"); and (3) assessing that the legitimate interest(s) is (are) not overridden by the interests or fundamental rights and freedoms of the data subjects (also referred to as "balancing test").

# The EU AI Act

New Rules for

- **AI Systems**
- **GPAI Models** [General Purpose AI]

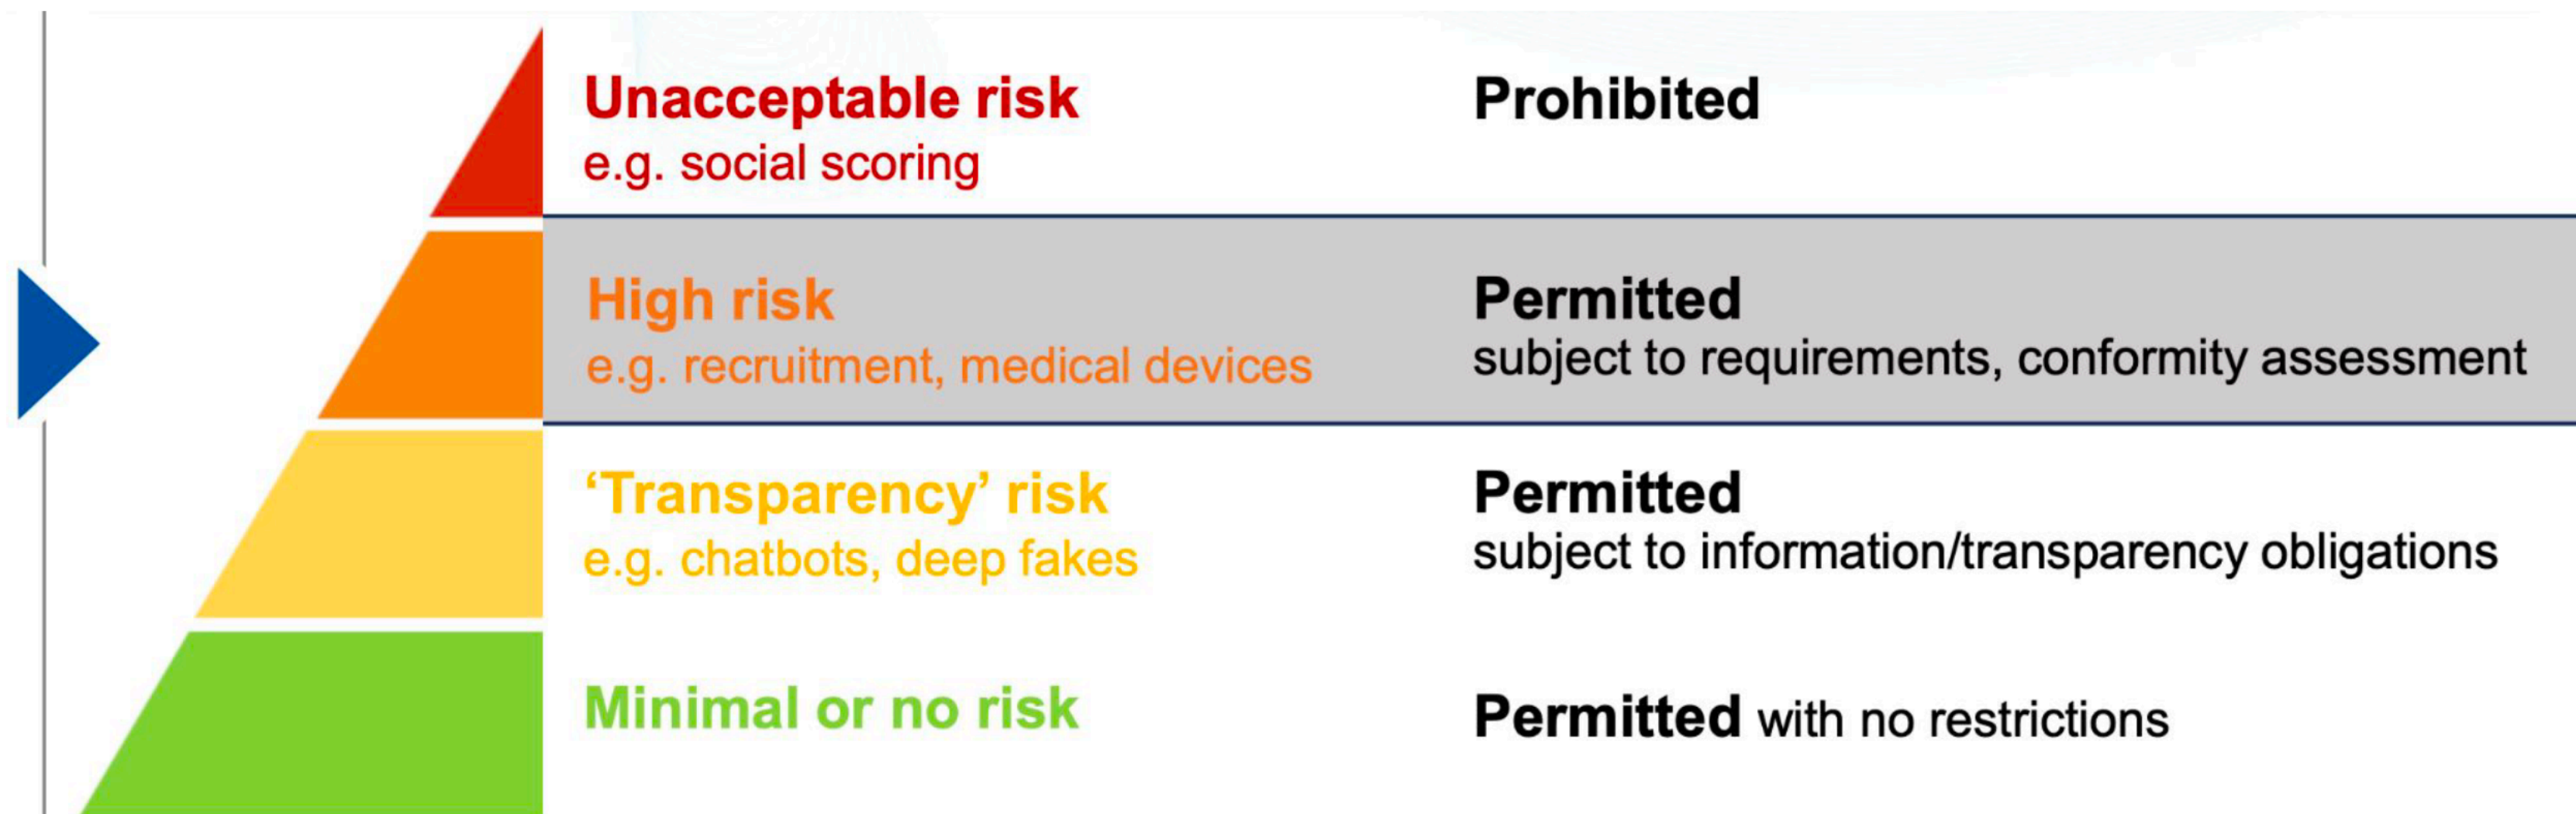

Promotes human-centric & trustworthy AI

Protects against **harmful effects** of AI on

- **Health**
- **Safety**
- **Fundamental Rights**

# AI Systems Risk-Based Classification

From the EU AI Office webinar on risk management in the AI Act and related standards, 30 May 2024

# AI Act —> GenAI

- AI Act specifically address Generative AI or GenAI
- It requires transparency for specific models
- Requires transparency
- Requires risk assessment
- Requires clarification on what the model can / cannot do, or is intended to do

# Existing approaches

## Datasheets and Model cards

- Good to start with - they tell you what info to consider
- BUT - they are not complete
- - not structured
- - not formally defined
- - not “usable” to audit
- - often incomplete
- - unclear legality

<https://arxiv.org/pdf/1803.09010>

Codes of conduct	[EU, use of AI and data in teaching and learning for educators]

# What am I working on?

**Privacy Risks, GDPR, Legal Compliance, Semantics**

# Machine-Readable Metadata for Automated Approaches

## Data Privacy Vocabulary (DPV) <https://w3id.org/dpv>

DPV's taxonomies provide semantic interoperability, which enables new, innovative, smart, and automated solutions

Demonstrated usefulness for important use-cases, e.g. ROPA, consent, compliance checking

We're looking to the future! DGA / ePR / AI-Act / Data Spaces

The Data Privacy Vocabulary (DPV) reflects ~5 years of efforts in creating an open resource providing concepts related to personal data processing, privacy, data protection, and GDPR

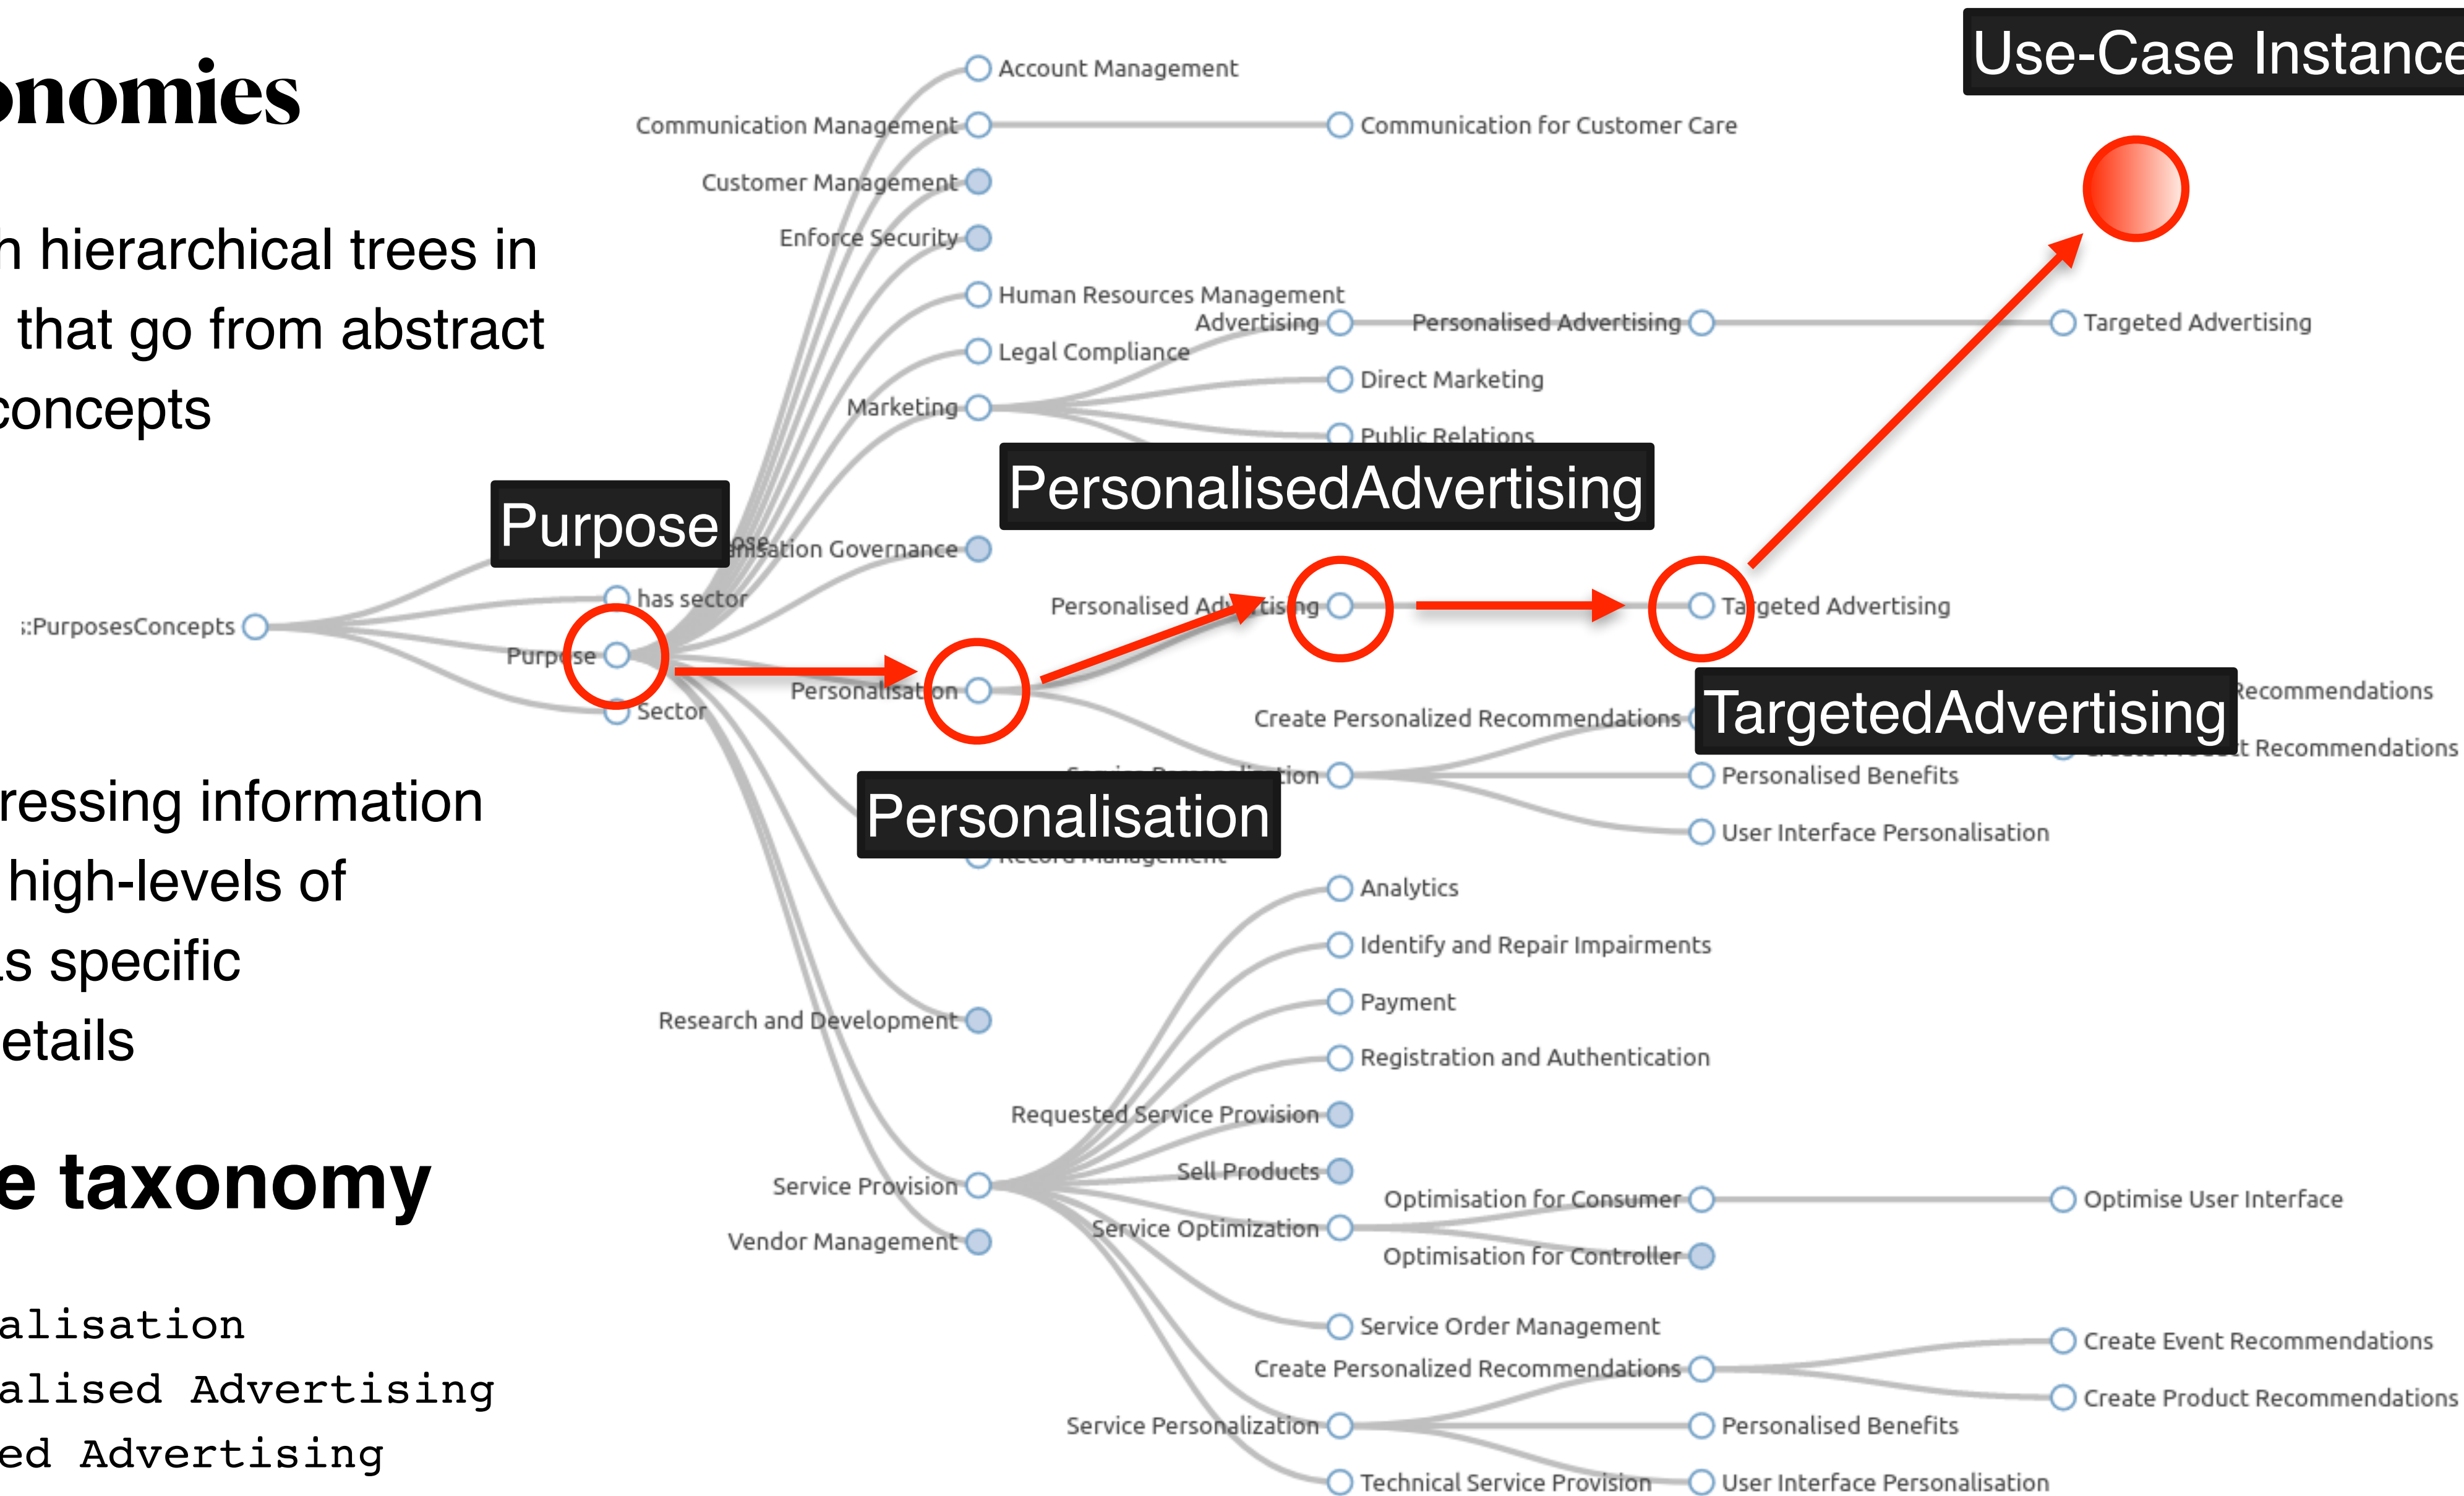

# DPV Taxonomies

DPV provides rich hierarchical trees in top-down fashion that go from abstract to more specific concepts

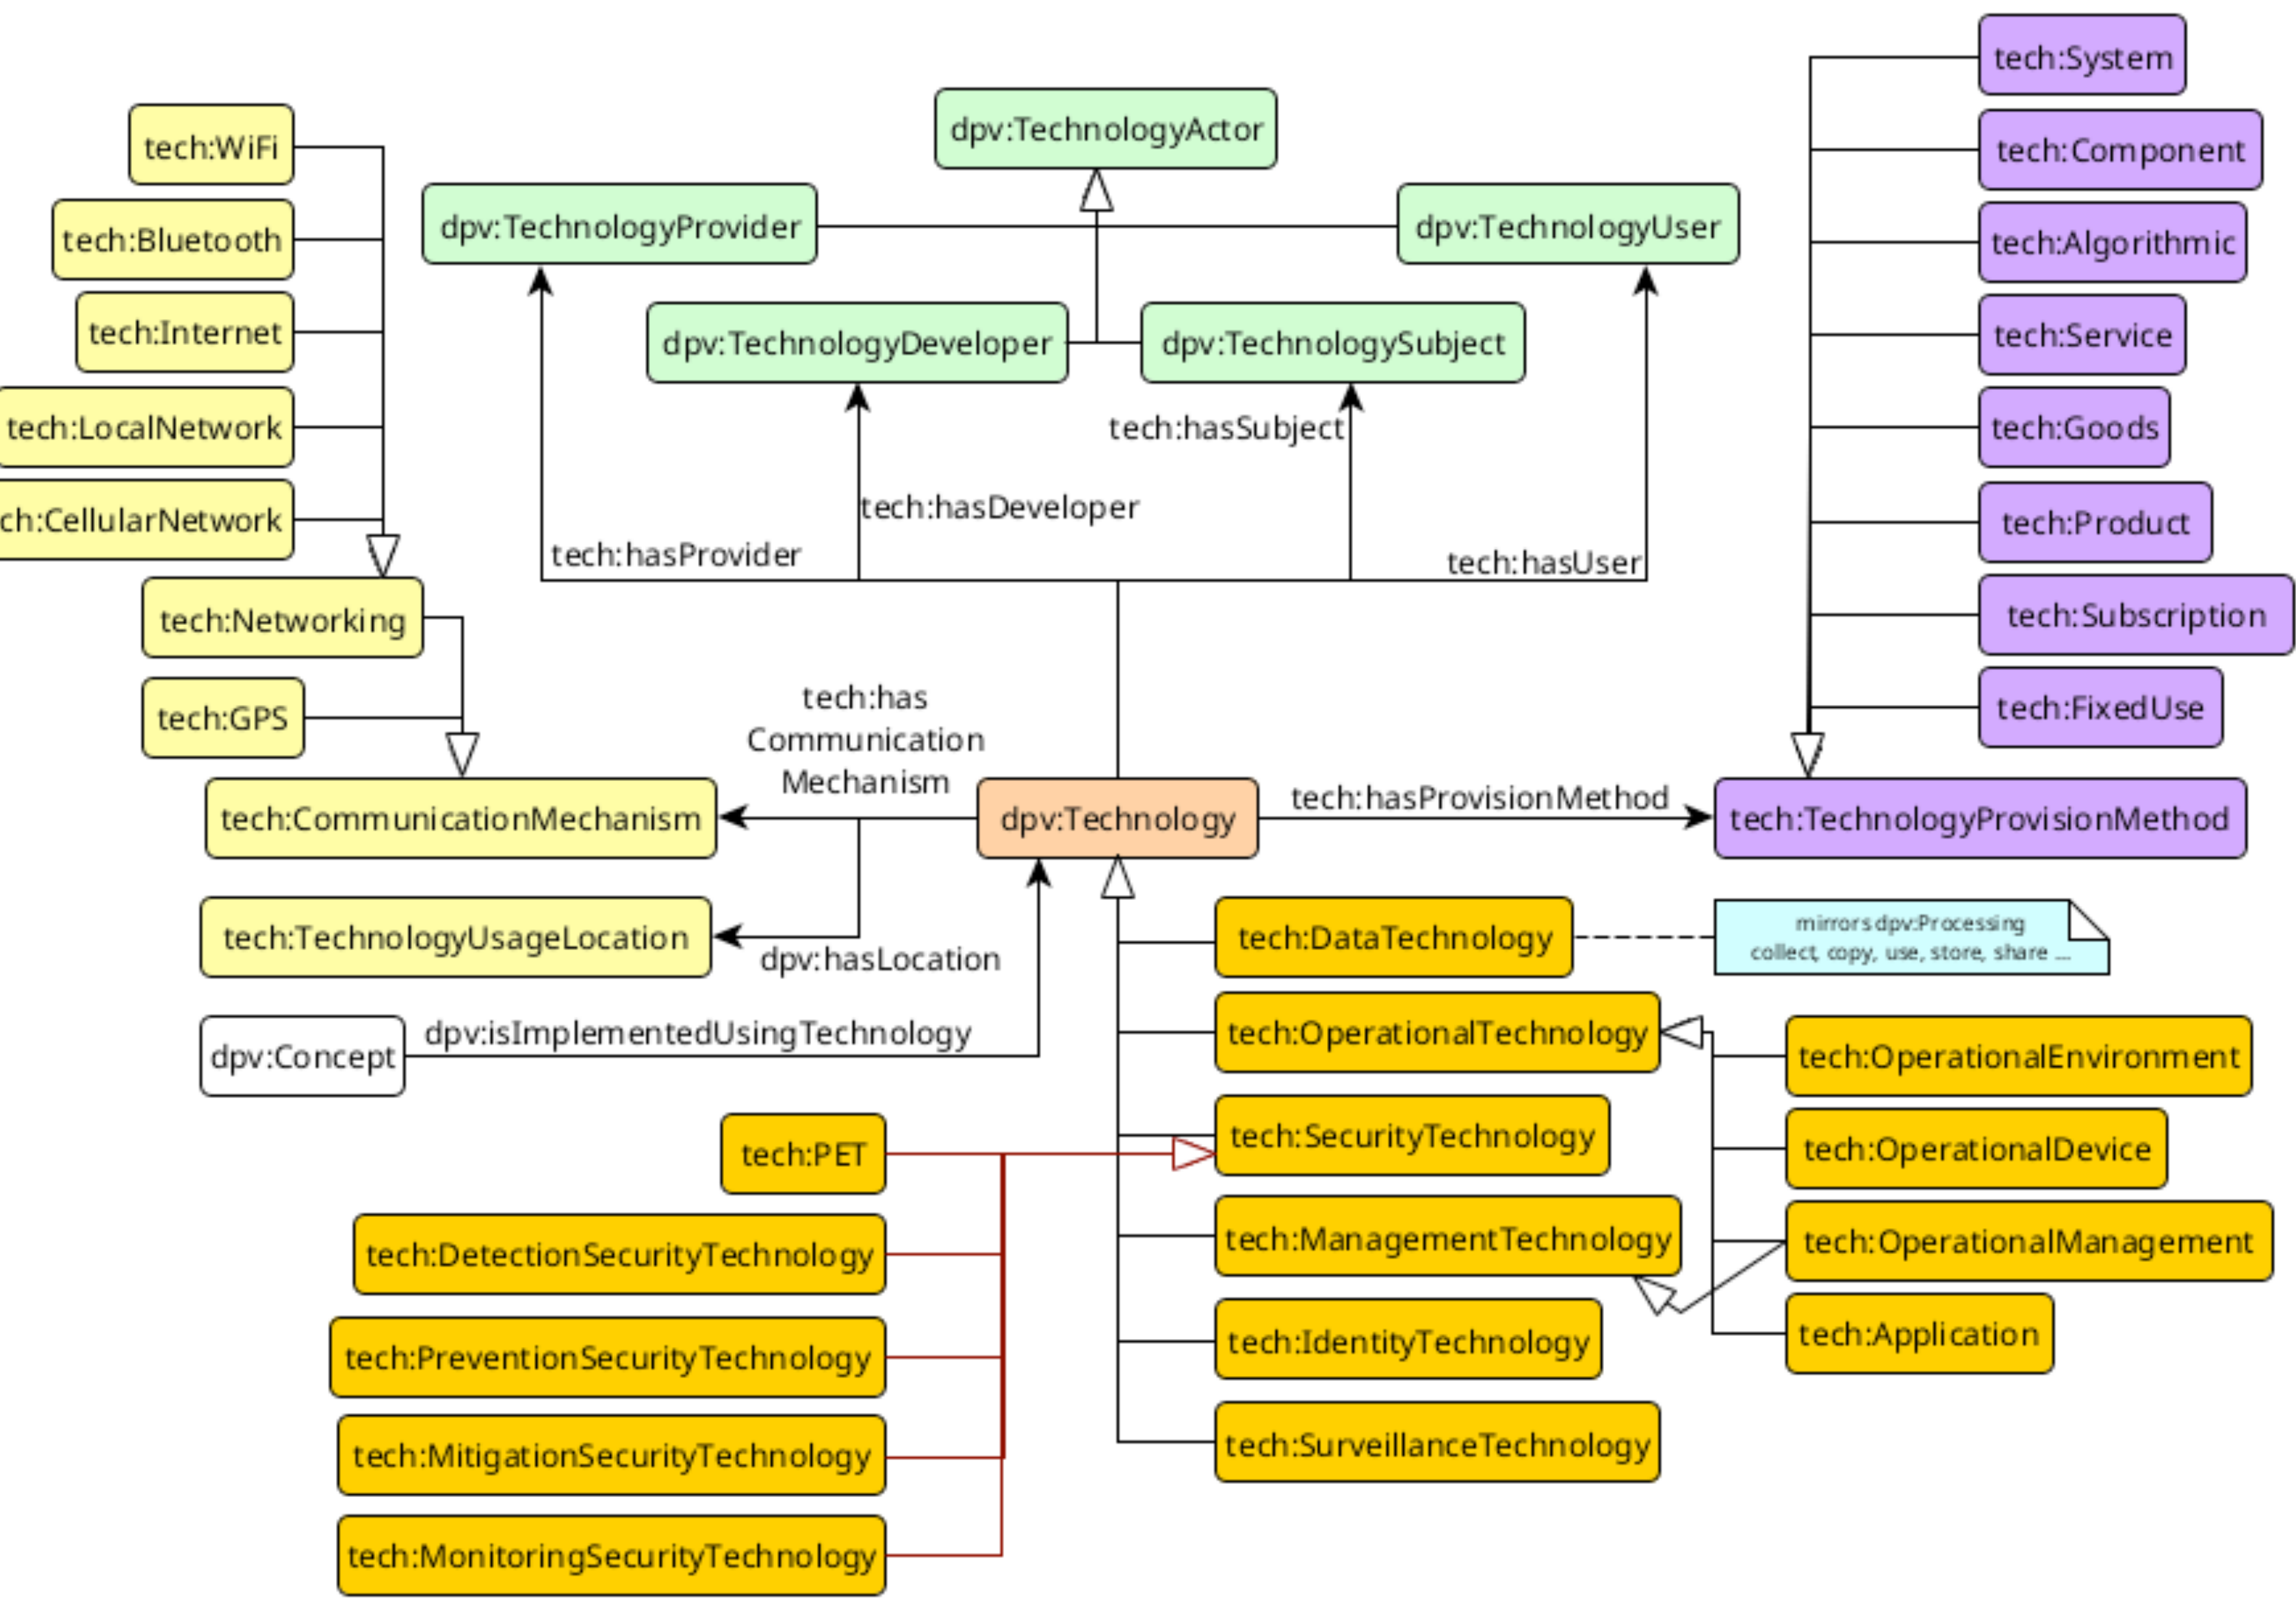

This enables expressing information and rules at both high-levels of abstraction and as specific implementation details

## E.g. Purpose taxonomy

- Purpose → Personalisation
- Personalised Advertising
- Targeted Advertising

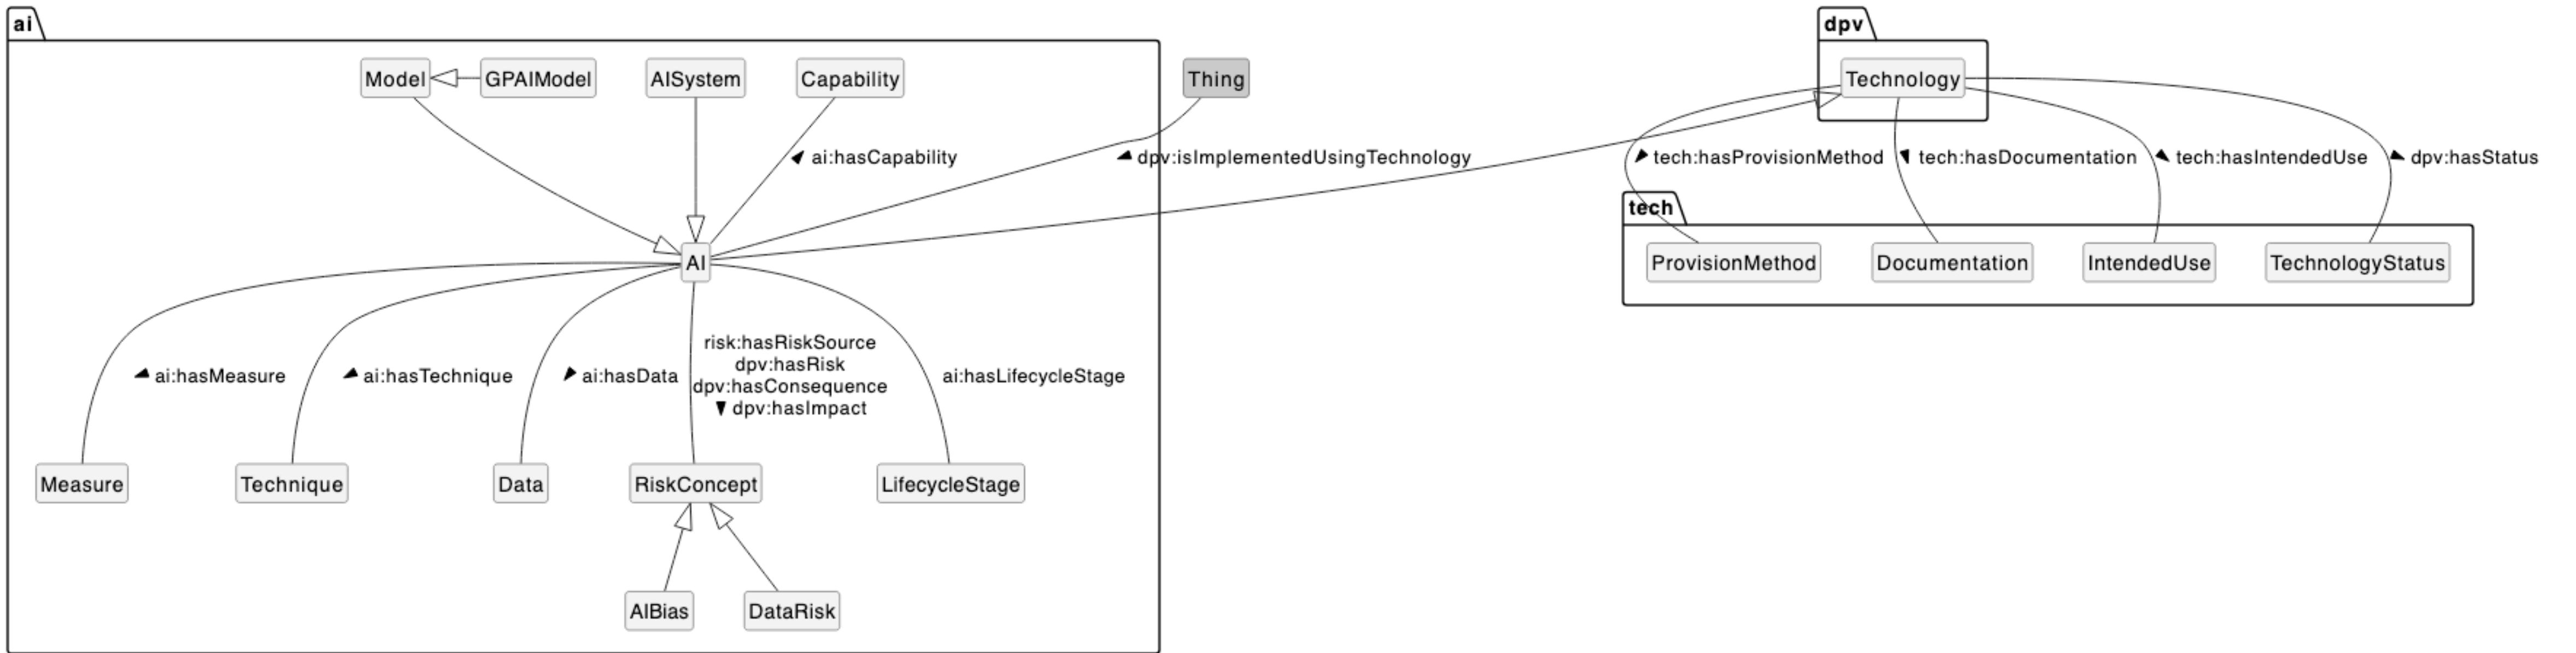

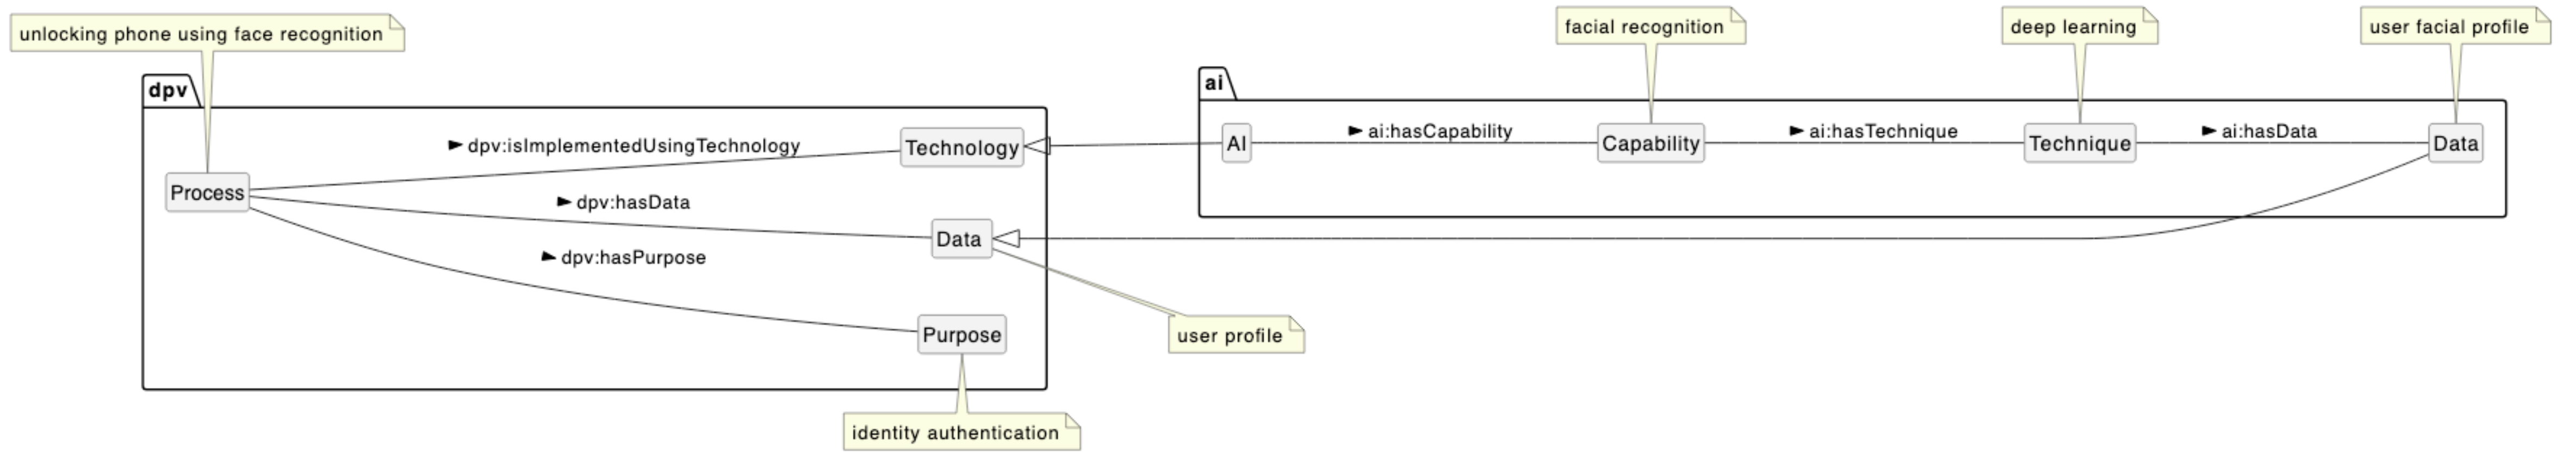

# A 'Model' of Technologies

## § 3.4.1 Risk Matrix 3x3

Likelihood ↓ Severity →	Low	Moderate	High
High	<a href="#">RM3x3S1L3</a>	<a href="#">RM3x3S2L3</a>	<a href="#">RM3x3S3L3</a>
Moderate	<a href="#">RM3x3S1L2</a>	<a href="#">RM3x3S2L2</a>	<a href="#">RM3x3S3L2</a>
Low	<a href="#">RM3x3S1L1</a>	<a href="#">RM3x3S2L1</a>	<a href="#">RM3x3S3L1</a>

4. **risk:TechnicalRiskConcept**: Risk concepts, including any potential risk sources, consequences, or impacts, that are technical in nature or relate to a technical or technological process [go to full definition](#)

a. **risk:Bias**: Bias is defined as the systematic difference in treatment of certain objects, people, or groups in comparison to others [go to full definition](#)

-

1. **risk:CognitiveBias**: Bias that occurs when humans are processing and interpreting information [go to full definition](#)

+

2. **risk:DataBias**: Bias that occurs when data properties that if unaddressed lead to systems that perform better or worse for different groups [go to full definition](#)

-

A. **risk:DataAggregationBias**: Bias that occurs when aggregating data covering different groups of objects has different statistical distributions that introduce bias into the data [go to full definition](#)

B. **risk:DataProcessingBias**: Bias that occurs due to pre-processing (or post-processing) of data, even though the original data would not have led to any bias [go to full definition](#)

C. **risk:InformativenessBias**: Bias that occurs when the mapping between inputs present in the data and outputs are more difficult to identify for some group [go to full definition](#)

D. **risk:SimpsonsParadoxBias**: Bias that occurs when a trend that is indicated in individual groups of data reverses when the groups of data are combined [go to full definition](#)

E. **risk:StatisticalBias**: Bias that occurs as the type of consistent numerical offset in an estimate relative to the true underlying value, inherent to most estimates [go to full definition](#)

+

b. **risk:DataRisk**: Risks and risk concepts related to data [go to full definition](#)

-

1. **risk:DataBias**: Bias that occurs when data properties that if unaddressed lead to systems that perform better or worse for different groups [go to full definition](#)

+

2. **risk:DataInaccurate**: Concept representing data being inaccurate [go to full definition](#)

3. **risk:DataIncomplete**: Concept representing data being incomplete [go to full definition](#)

4. **risk:DataInconsistent**: Concept representing data being inconsistent [go to full definition](#)

# Challenges e.g. Provide vocabulary to specify purposes and permissions related to AI training #82

<https://github.com/w3c/dpv/issues/82>

## 1. **new:TrainingByStrategy**

- **new:SupervisedTraining** that uses **ai:SupervisedLearning** with **new:LabelledData** - where contextual information involves provenance of labelled data such as its source, who created the labels and its categorisation as sensitive etc.;
- **new:UnsupervisedTraining** that uses **ai:UnsupervisedLearning** with **new:UnlabelledData** - where contextual information involves provenance of unlabelled data such as its source;
- **new:ReinforcementTraining** that uses **ai:ReinforcementLearning** by using **new:Feedback** that act as **new:Reward** or **new:Punishment** - where contextual information involves the algorithm deciding the feedback;
- **new:SelfSupervisedLearning** that uses **new:UnlabelledData** - where contextual information involves provenance of unlabelled data.

## 2. **new:TrainingByAdapting**

- **new:TransferLearning** reuse a trained model for a new task in another model;
- **new:FineTuning** where a trained model is refined using new data - in particular for a specific domain or use-case;
- **new:FewShotTraining** where a trained model is given a few labelled data points to learn from - where the sample is small and not specific enough to be considered fine tuning.

## 3. **new:TrainingByFrequency**

- **new:StaticTraining** where the model is trained once;
- **new:PeriodicTraining** where the model is trained periodically;
- **new:ContinousTraining** where the model is trained continuously e.g. as new data arrives;
- **new:IncrementalTraining** where the model is trained in increments that are small and do not cause a full or significant retraining;
- **new:FederatedTraining** where the model is trained in a federated manner e.g. locally on device;

## European Open Source AI Index

# In conclusion...

- Many unknowns
- We're still figuring out how to *describe AI/ML technologies* in line with laws
- ML and Personal Data is a complicated affair
- Several important issues exist, but aren't being solved
- Existing approaches don't fix stuff
- Risks/Harms are a challenge that *MUST* be taken into account and addressed
- Lots of work to be done ...
